Thermoplastics

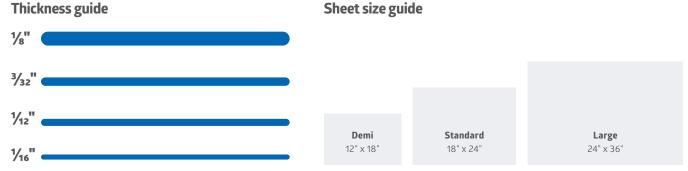

With a variety of thermoplastic materials to choose from, Medline is committed to providing you the best product for your patients. Whether you need smooth or perforated, sheets or precuts, we have you covered for your various custom orthotics.

Thermoplastic terminology breakdown

Terminology	Description
Memory	The ability of the material to return to its original size and shape after being stretched
Resistance to Stretch (RTS)	The extent to which a material resists or rebounds when pulling or stretching when heated
Drape/conformability	The amount of drape that the material naturally provides once heated. Important for conformability
Rigidity	Refers to the strength of the material or finished orthoses
Bonding	The ability of the material to stick to itself or to other materials when heated
